Please find below and/or attached an Office communication concerning this application or proceeding.

	Application No.	Applicant(s)					
Office Antique Comment	09/731,581	MAYMUDES ET AL.					
Office Action Summary	Examiner	Art Unit					
	Ba Huynh	2179					
The MAILING DATE of this communication appears on the cover sheet with the correspondence address Period for Reply							
A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION. - Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication. - If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely. - If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication. - Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).							
Status							
1)⊠ Responsive to communication(s) filed on <u>28 March 2005</u> .							
2a) ☐ This action is FINAL . 2b) ☑ This	action is non-final.						
3) Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under <i>Ex parte Quayle</i> , 1935 C.D. 11, 453 O.G. 213.							
Disposition of Claims							
4) Claim(s) 1-25 and 27-51 is/are pending in the application. 4a) Of the above claim(s) is/are withdrawn from consideration. 5) Claim(s) is/are allowed. 6) Claim(s) 1-25 and 27-51 is/are rejected. 7) Claim(s) is/are objected to. 8) Claim(s) are subject to restriction and/or election requirement.							
Application Papers							
9)☐ The specification is objected to by the Examiner.							
10)☐ The drawing(s) filed on is/are: a)☐ accepted or b)☐ objected to by the Examiner.							
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).							
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d). 11) The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.							
Priority under 35 U.S.C. § 119							
12) Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f). a) All b) Some * c) None of: 1. Certified copies of the priority documents have been received. 2. Certified copies of the priority documents have been received in Application No 3. Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)). * See the attached detailed Office action for a list of the certified copies not received.							
Attachment(s)							
1) Notice of References Cited (PTO-892) 4) Interview Summary (PTO-413)							
Notice of Draftsperson's Patent Drawing Review (PTO-948) Information Disclosure Statement(s) (PTO-1449 or PTO/SB/08) Paper No(s)/Mail Date	Paper No(s)/Mail Da 5) Notice of Informal Pa 6) Other:	te atent Application (PTO-152)					

DETAILED ACTION

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 3/28/05 has been entered.

Claim Rejections - 35 USC § 103

- 1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 2. Claims 1-25, 27-51 are rejected under 35 U.S.C. 103(a) as being unpatentable over Gonsalves et al.
 - As for claims 1, 11, 12, 21-23, 27-30: Gonsalves et al teach a computer implement system and corresponding method for rendering video, comprising the means/steps of:

a video application (fig. 5) configured to enable a user to combine multiple different video clips (1:11-14),

bitmap processors operatively coupled with the video application and configured to receive a first bitmap ("original matte image", 3:14-16) that can be used to render a transition between video clips and automatically process the first bitmap to provide a

Art Unit: 2179

different transition based upon user input (3:18-67; 10:3-8). The first bitmap does not comprise video clip content (i.e., the matte image can be created according to other images (3:30-31; 10:3-8). Gonsalves et al fail to clearly teach that the transitions are configured to enable one video clip to completely replace another video clip. However, since the matte image is user configurable, it is within the context of Gonsalves that the user may configure the matte image such that the background image completely replaces the foreground image instead of just a portion of the foreground image. One of skill in the art would motivate to such implementation to provide a transition effect for displaying a complete background image, whenever desired.

Page 3

- As for claims 2, 3, 13, 24, 31, 50: The first bitmap is processed through different modules (figure 6) to provide a second bitmap that is that is different from the first bitmap, to render a different transition (1:45-48; 3:18-67; 10:3-8).
 - As for claims 4, 14-16, 33-35, 41-43: Gonsalves et al fail to clearly teach the means for stretching and/or shrinking the bitmap. However stretching/shrinking are well kwon bitmap editing operations (see US patent #6,069,668, 5:20-22). It would have been obvious to one of skill in the art, at the time the invention was made, to combine the well-known implementation of stretching/shrinking to Gonsalves et al.

 Motivation of the combining is for, e.g., matching the matte bitmap to the video frame.

Art Unit: 2179

- As for claims 5, 17, 36, 44: Replication of the first bitmap image is inherently included edit operation (e.g., copying, saving). Replication is also disclosed in modification of the first bitmap image (3:7-67; 10:69).
- As for claims 6, 18, 37, 45: Depending on the type of filter (1:55-60), the input parameter (8:40-62), the type of special effect (10:3-5), and/or the bitmap image used (e.g., original, intermediate, or the composite matte image (10:5-8)) the system provides an offsetting to the bitmap or a transition that is offset from the transition provided by the first bitmap.
- As for claims 7, 19, 38: The system includes means configured to provide a border ("edge") in a transition defined by the first bitmap (4:48-56; 8:9-13).
- As for claims 8, 20, 25, 46, 51: Replication of the first bitmap image is inherently included edit operation (e.g., copying, saving). Replication is also disclosed in modification of the first bitmap image (3:7-67; 10:69). Depending on the type of filter (1:55-60), the input parameter (8:40-62), the type of special effect (10:3-5), and/or the bitmap image used (e.g., original, intermediate, or the composite matte image (10:5-8)) the system provides an offsetting to the bitmap or a transition that is offset from the transition provided by the first bitmap. The system includes means configured to provide a border ("edge") in a transition defined by the first bitmap (4:48-56; 8:9-13). Gonsalves et al fail to clearly teach the means for stretching and/or shrinking the bitmap. However stretching/shrinking are well kwon bitmap editing operations (see US patent #6,069,668, 5:20-22). It would have been obvious to one of skill in the art, at the time the invention was made, to combine the well-known implementation of stretching/shrinking to

Art Unit: 2179

Gonsalves et al. Motivation of the combining is for, e.g., matching the matte bitmap to

Page 5

the video frame.

- As for claims 9, 10, 40: The system is configured to receive parameter(s) provided by the user to process the bitmap (8:40-62). The parameter(s) can be used to change the structure of the bitmap (8:3-5, 17-21).

- As for claim 32: Per Gonsalves et al, the original matte bitmap is processed through multi-stages of filtering to generate an intermediate matte image, a processed matte image, and other types of filters for filtering the processed matte images (3:14-67).

 The filtered matte images have predetermined gray scale values (6:4-24).
- As for claims 39, 47, 48: Gonsalves et al teach a computer implement system and corresponding method for rendering video, comprising the means/steps of:

a video application (fig. 5) configured to enable a user to combine multiple different video clips (1:11-14),

bitmap processors operatively coupled with the video application and configured to receive a first bitmap ("original matte image", 3:14-16) that can be used to render a transition between video clips and automatically process the first bitmap to provide a different transition based upon user input (3:18-67; 10:3-8). The first bitmap does not comprise video clip content (i.e., the matte image can be created according to other images (3:30-31; 10:3-8). The matte bitmap are filtered to predetermined gray scale values (3:14-67; 6:4-24). Gonsalves et al fail to clearly teach that the transitions are configured to enable one video clip to completely replace another video clip. However, since the matte image is user configurable, it is within the context of

Art Unit: 2179

Gonsalves that the user may configure the matte image such that the background image completely replaces the foreground image instead of just a portion of the foreground image. One of skill in the art would motivate to such implementation to provide a transition effect for displaying a complete background image, whenever desired.

As for claim 49: Gonsalves et al teach a computer implement system and corresponding method for rendering video, comprising the means/steps of:

a video application (fig. 5) configured to enable a user to combine multiple different video clips (1:11-14),

means for receiving parameter(s) provided by the user to process the bitmap (8:40-62). The parameter(s) can be used to change the structure of the bitmap (8:3-5, 17-21). The parameters include a range that defines a border thickness that is used in connection with the matte bitmap to effect the second transition (6:17-24; 8:13 - 10:2) bitmap processors operatively coupled with the video application and configured to receive a first bitmap ("original matte image", 3:14-16) that can be used to render a transition between video clips and automatically process the first bitmap to provide a different transition based upon user input (3:18-67; 10:3-8). The first bitmap does not comprise video clip content (i.e., the matte image can be created according to other images (3:30-31; 10:3-8). Gonsalves et al fail to clearly teach that the transitions are configured to enable one video clip to completely replace another video clip. However, since the matte image is user configurable, it is within the context of

Gonsalves that the user may configure the matte image such that the background

Art Unit: 2179

desired.

image completely replaces the foreground image instead of just a portion of the foreground image. One of skill in the art would motivate to such implementation to provide a transition effect for displaying a complete background image, whenever

Response to Arguments

- 4. Applicant's arguments have been fully considered but they are not persuasive in view of the new ground of rejection.
- Any inquiry concerning this communication or earlier communications from the examiner should be directed to Ba Huynh whose telephone number is (571) 272-4138. The examiner can normally be reached on Mon Fri.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Heather Herndon can be reached on (571) 272-4136.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
